

Visual MIBrowser Professional

Monitor, Archive, and Analyze through SNMP

Visual MIBrowser Professional

NuDesign's Visual MIBrowser Professional has an intuitive interface and broad feature set that make it ideal for cost-effectively monitoring, archiving, and analyzing data retrieved from SNMP-enabled devices.

Visual MIBrowser Professional

Monitor (I)

- simultaneously monitor multiple agents
- receive SNMP traps
- chart statistics in real time
- set alarm thresholds directly on charts
- send threshold-triggered alarm notifications as emails
- auto-discover SNMP agents

Visual MIBrowser Professional

Monitor (II)

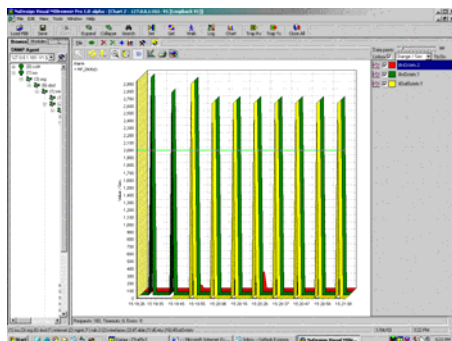

- save and re-execute commonly-used queries
- handle SNMP v3 operations using security (encryption, authentication, authorization) and administrative framework (notification destination, username management)
- run Visual MIBrowser Professional as a service under Windows NT/2000/XP: Visual MIBrowser Professional will start with Windows, and alerts will appear in Window's system tray

Visual MIBrowser Professional

Monitor (III)

Visual MIBrowser Professional's internal charting and graphing capabilities make it an effective way to get immediate results on SNMP network activity.

Visual MIBrowser Professional

Archive

- automatically poll data from SNMP devices
- store polled data in a relational database engine
- collect and store traps
- save analysis charts and data

Visual MIBrowser Professional

Analyze

- view logs of traps and other recorded events for a given day or given device
- generate charts and graphs based on logged events
- generate customized reports of events and trends

Visual MIBrowser Professional
